

**Question:**

How will this delay in the pdf of the JIQ affect the timetable will we be given an extension to complete it? I hope so this is already a time consuming labour intensive document to complete properly.

**Answer:**

The timelines will be adjusted to take into account the delayed circulation of the JIQ. Extensions will be granted if required.

**Question:**

In section "5" subsection "A" you're asked to include any specialized training beyond what is received in basic or QTP training. As all RAAS, equipment, etc training not received at NCTI is now included in QTP training, what would qualify as specialized other than something like OJI training?

**Answer:**

The question was meant to capture all specialized training at all units due to different services being provided. That training should be a part of the UQTP but the Working Group wanted to ensure that any site that may have any additional duties that required specialized training could include it. For example, some units monitor alarms for non-ATS purposes because we are the only 24-hour operation there. Training should be given on how to monitor that alarm and more importantly the procedures to follow when it goes off.

**Question:**

Section 5 subsection "C" asks for specific procedures or policies which may be used at our site. The example given is MANOPS which is far from specific as it covers everything we do except weather. I don't quite understand what the question is asking.

**Answer:**

The question pertains to site specific agreements, tasks or procedures that may be outlined in the Unit Specific section of the UQTP or in local agreements/arrangements with local airport authorities or ATS units, etc. It may also pertain to specific or unique pieces of equipment that are used or required at a site.
